

WHAT TO PLANT IN NOVEMBER IN ZONE 9

COOL-SEASON GARDEN GUIDE

Zone9Garden.com
A Vegetable Gardening Blog

GARLIC

Plant individual cloves. Establish before winter for a spring harvest.

STRAWBERRIES

Plant healthy transplants. Great time to establish plants for winter and spring harvests.

LETTUCE

Direct sow or transplant. Cooler weather improves germination and flavor.

SPINACH

Direct sow. Cooler temperatures improve germination and growth.

CARROTS

Direct sow. Keep soil loose and moist for best germination and straight roots.

RADISHES

Direct sow. Fast-growing and perfect for succession planting.

BEETS

Direct sow. Harvest roots and greens. Cool weather improves flavor.

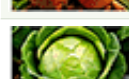

PEAS

Direct sow. Provide a trellis for climbing varieties.

ONIONS

Plant short-day varieties or sets suited to your region.

CABBAGE

Start or transplant. Give plants time to mature in cool weather.

CAULIFLOWER

Start or transplant. Protect from extreme heat early on.

BROCCOLI

Start or transplant. Plant early enough for full maturity before coldest weather.

COLLARDS

Direct sow or transplant. Hardy and productive all fall and winter.

KALE

Direct sow or transplant. Cold weather improves flavor.

TURNIPS

Direct sow. Harvest roots and greens. Great for fall and winter.

ZONE 9 GARDENING TIP

Always adjust for your specific location, weather, and Zone 9a or Zone 9b conditions.

Plan now. Plant smart.
